- Management of Service Providers.
- Reminder Pop-ups on expiry
- Time to time Asset Verification
- Accurate Asset Market Value
- Asset Performance Reports
- Maintenance Cost Reports
- Data Collection and Analysis
- Features data in the form of responsive tiles

Introduction

Improved Regulatory and Security
- With asset tracking systems such as FAMS, it becomes easier to store and track data accurately.
- Easy to record every action logged by users, and role-based access permissions ensure that only authorized personnel can access sensitive data.

Accurate Reporting
- Offers companies real-time data on how each asset functions
- Streamlines the management process, improving the overall profitability of your organization.
- Helps reduce human errors in asset performance monitoring

Reduced Maintenance Expenses
- Asset Expert software stores essential information about assets and notifies them according to the expiration of their life.
- Also aids in maintenance task scheduling and alert generation
- Reducing unnecessary costs due to mismanagement of assets

Streamlined Operations
- Critical for determining which assets in the organization are under user, their location, their cost center, etc.
- To receive status updates on the process when needed.
- Eliminates unnecessary steps from daily operations, making them more efficient and faster

Budgeting and Cost Reduction
- A reliable storing and tracking system for keeping track of stock levels and materials. Gives companies total control over their current stock and potential purchasing decisions.
- Asset traits like asset depreciation, can predict individual asset life spans and allow them to be replaced.
Asset Life Cycle

Planning - **Planning is the first stage of the asset Life Cycle. It establishes asset requirement based on evaluation of Existing Assets.**

Acquisition - **This begins the life cycle of the asset. Once the asset I Identified, acquired and installed into the business, it can then be tracked throughout its entire life cycle process.**

Operations & Maintenance - **This stage indicates the application and management of an asset, including insurance, verification, AMC, etc.**

Disposal - **The end of the Asset's Life Cycle. It is removed from service and either sold, discarded, or shifted out.**

ASSET Thread
